INSTITUTION OF CIVIL ENGINEERS.

Haves it and the hambledge of the properties of the arch personnel by the anticolus upon the hambledge of the properties of the arch personnel by the anticolus was reinvestign the presentation, by Mr. Page, of drawings of two strickes, standing more some cyclopean remains at Cape Crio (Caidus). There was no positive evidence of the date of these arches, but, from their being built without mortar, and the massivaness of their construction, it was agreaf that they went citoside.—The failure of the Pool of Bourie, at Litre, white unit so meits, and tracked of the pites theory on effects at the failing it their takes down, was fully explained by Mr. Himsis, who personnel as demands of maning of it.—Mr. B. Green exhibited a dealing for the proposed standard, or excited a dealer of the proposed standard, or exists electric souther, for ossesting Gatesbasi with Newcastlanger. The first paper read was, "An Account of the Harbour of Pultrary Town (Wist Caidheses, N. B.)."—This harbour, which was designed by Mr. Tellers, for the British Falseries Society, in 1803, and for which the first part of the wastes over executed between 1805 and 1811, by Mr. Bares, at an expense of 16,4001. The success of the herring fishery, and the consequent increase of the control of the society of the proposed standard and in the subjuging frequenting the port, readered a more extraord horizon was given in great detail, with the ingrainous methods employed in their exaction, as a down the excession of the works. The rulesed works were secured the the remainder of that year, by their days was used to expend on the consequent increase were given in great detail, with the ingrainous methods employed in their exaction, as down to the reader were completed, and have stond execution of the works were given in great detail, with the ingrainous methods employed in their exaction of the works. The rulesed works were secured for the remainder of that year, by theiring observations were made to the exaction of the works

GREAT BRITAIN MUTUAL LIPE ASSURANCE SOCIETY.

Among the societies for the neutrons of Hore, we have before called attention to those established on the control principle. In these beneficial institutions, there is no classing of interests between policy bolders and observabledors—the only object being, the permanent, as well as present, hearfit to the executed, to whom all the accumulated pendia, as a matter of right, each sively belong. Experience has doubly proved that they are perfectly safe, and do not require the appearive incumbrance of a subscribed empital.

It is now one duly to call the attention of the public to the Great British Material Life Assurance Society, founded on the basis of the most library of the assurance offices; the rates appear to have been calculated with great care, and, while they are audiciently high to afford complete security to the policy believe, it is estimated that the managers will, at the expiration of fact a reduction of fall to per care, on fature premiums out of the provision of fall to per care, on fature premiums out of the present of this society are — Credit for the first fire annual premiums, on security being given for their distinance payment. Credit for half of the first fire annual premiums, orthone security, then enabling persons who have a gradually increasing increase to areal themselves of the prodits which accurate, we have a present and object by the high rate of personance of the prodits of the first fire annual premiums, orthone security, then enabling persons who have a gradually increasing the most in a province of the prodits which accurate in or example, square to a relative the first fire years, and when the results of payment is an apparent of the prodits which accurate no accide the work of the first fire annual probability, would not exceed 16. 10s. 10sl. Thus, persons even with small increases, and who there were not a superior of the first fire and of the s

results Advertiser has adopted the article "Statistics of the Ameri "interted in last week's Mining Journal, as one of its principal is a like histories of an consequences a position to our confequencies;" is no sufficient outsidestion. Without a synthing as acknowledgment. —" A Constant Reader (Trues) —" J. Q." —" Truffic." The Newcould Advertiser has a Trade," inserted in last weat Periogn the honour of so on should be sufficient estimate.

THE MINING JOURNAL, Mailway and Commercial Gajette.

LONDON, MARCH 16, 1844

We last adverted to the "moves" in Cornwall with reference to overtain "adventures," among which we happened to notice Wheal Acland. On this we have a word or two to offer—while Stray Park, which has been rendered a jobbing piece of machinery, in the hands of the Cornish "clique," is noticed in another column. We believe, that in directing attention to Wheal Acland, we are doing an injustical transfer in the beautiful to notice and have

of the Cormish "clique," is noticed in norther column. We believe, that in directing attention to Wheal Aclaud, we are doing an injustice to other setia, which have been brought into notice, and have obtained large premiums, by means equally as disreputable; out "each in its tern"—and our friends in the west may feel assured, that we shall not be unmindful of the services they have rendered. This mine is divided into 128 shares, and is situate in the locality of East Wheal Rose, and represented, in its early stage, as immediately adjoining—a trifing mistake, but one considered too insignificant to have any effect on the price of shares, until 404 had been secured. If we are rightly informed, the "clique," having purchased up all the shares, at 34 to 44 per share, immediately wrote, directly and indirectly, to parties in London, to ascertain at what price shares tould be obtained—of course unconscious that, the whole of the shares being held in the county, there might be some difficulty in obtaining any in the metropolis. However, the rese had the desired effect, and inquiry followed on inquiry, excitement and interest became manifested, and shares were in request. This done, an advance to 354 or 404 per share was the consequence; the "clique" sell out, the out adventurers are taken is, and prices fall, as a matter of course.

The system pursued by the Redruth gentry—with whom we are serry to find parties mixed up, whose former position in society should have led them to be more scrupulous as to the set with which they have become associated—is too notorious to require more than a general exposure; and we court information from those who, like ourselves, are anxious to uphold legitimate mining enterprise.

In directing attention to this mine, it most be understood, that we offer no opinion on its value; it may be, and, as we are informed on good authority, is, a promising piece of ground, and in a good locality. Our aim is alone, to expose the system pursued by the same party, to "get in," at the price to which

There is, we understand, another "move" now going on, of the same party, to "get in," at the price to which the shares have been reduced—but we trust that the shareholders in this and other undertakings will inquire for themselves as to the value of the mine, and not be led by the chicanery and dishonest practices which we feel it our duty thus to hold up to public reprobation.

Having, on more than one occasion, adverted to the "move-ents" in the Stray Park and Camborne Vean Mines, both as rements "in the Stray Park and Camborne Vean Mines, both as re-gards surface and underground operations—as well mining as on-deressing—we are well pleased to be in a position to render an ab-etract of the accounts and report colomitted at the late meeting of adventurers, from which those indecested, as well as our readers, will be better able to judge of the value to be attached to the in-formation conveyed through the medium of our columns. It is only right to state, in justification of the representations made, that we have good authority for advancing the following statement, and which, if well founded, or, indeed, based on honest grounds, as affording an exposition of a "game" played successfully by the "clique" in Cornwall, will, moshtless, have a moral effect, and thus be instrumental in upholding legitimate mining. The communicabe instrumental in upholding legitimate mining. The communication of our correspondent, who exclaims easily as to the management and the "system" pursued in the searcher of the shares, if not of the mine, claims our first notice; and, as we shall give the substance of the report itself, we need hardly say that the bane and

of the mine, cleams our first notice; and, so we shan give me accutance of the repose itself, we need hardly say that the bane and antichote is at the same time presented.

With reference to the wide difference in the weight of the ore in the Techeting Paper, and that actually sampled instinced in a forever Number), we believe, there is no question, for Mr. V. A. weak has never taken the alightest notice of the charge, although it is noted to the county of the county, as there is no the subject, on his part, is the most precision. Our coverion, that the discreption of the discreption of the discreption of the discreption, on the Mediacoday, and only on the Saturday following the crea were the town, we are told, were made out, and given to the samplers, on the Wednesday, and only on the Saturday following the crea were dividedly and, in proof of the deception precision—for each it must be considered—we are farther told that an imquiry was made on the mine, on that day, as to the consents of a parcel of ore, which was estimated at 100 tons by the agencia, but which turned out to be it tons 10 ceta—them displaying ignorance on the part of the agents, or a design, which we can hardly well tongine. Our recreation has been precisiond—for instance, he cays, in Mr. V. a. w. o. a.v. a square of the acquaint and prospects of the sine, send out to the adventureers in June last, he distinctly stated that "the mine was in a sound and healthy state, and under the ordinary circums—was in a sound and healthy state, and under the ordinary circums was in a sound and healthy state, and under no ordinary circum-ciances. New markinsey had been recursed to the value of 2000, without calling on the adventurers for fresh capital—the mine sup-plying the mount from its own resources." Our correspondent then

traid there a party who hold get always, has, by false representation, recitive in the confidence of the second of

put note a fair course of working. The water having here provided in the second second

We shall now proceed to give an extract from the report, which will be read with interest, as regards the adventure itself—while we can only express our hope, that we shall not be again called upon to animadvert on the conduct of any party connected with the undertaking:—

supon to anismatvert on the conduct of any party connected with the undertaking:

At Camborne Vean the engine-shell is drained to bottom, which is the list fathers level. A cross-cut is here driven month, and a level opening on the lode eastward, which, within a few weeks, will reach that point where the ore depining from the level above will be met with; the will yield group productive ground. The evidence in the level above will be met with; this will yield group productive ground. The evidence in the level above, will be met with; this will yield group productive ground. The evidence in the level above, the bedience of which is ground an under water, being clear and conclusive that here is no disappointanced will exist. At this 180 a cross-cut will shortly be driving sends, which, without a short distance, will inderwest fitting. For we shall have surveningle ground to a very great extent east, west, and in depth, which will be productive to a greater or least depth. There is inductive for we shall have surveningle ground to a very great extent east, west, and in depth, which will be productive to a greater or least depth. There is inductive for we shall have surveningle ground to a very great extent east. There is another motive will be productive to a greater or least depth of the shallow be very great extent induction, which is another motive of our monit actions consideration, it alloads in its being so which, in a mining point of water, is I pressure, as circumstance of the highest value, and we have a right to say, that we believe used junction will be one of profit. Our Stray Para south loder continues productive from the bank of the eighty farhous level down to the 120, which at present is the depart level, and is alwan. In the betterm of the 120 we have pitches working on a tribute of do, in the class of the count of the continues productive working on a tribute of do, in the class of the count of the count of the count is strong, in far as we have greater in depth, that the elvan enther levels the

In a circular addressed the adventurers by Mr. Vawdary (the manager of the mines), referring to the accounts which accompany the report, he expresses his conviction that "the mine is steadily and surely advancing to a sound and healthy state for future profit."

At the meeting held on the 8th instant, the accounts ending in December last were passed, and the call of 3l. per share determined upon; Messers. Vawdary, Willyams, Hodor, Lanyon, and Parry, were elected as committee for the ensuing twelve months. In the course of the proceedings, Mr. H. Willyams entered his protest against the proceedings of the meeting was not stated in the notices issued, and, moreover, that such notice was insufficient as to time. A strong feeling appears to exist on the part of several of the adventurers, as to the management—it being considered that Mr. Jerramy had been unceremoniously ousted. The accounts rendered appear to be of a comprehensive character, and the system on which they are kept we should be glad to see adopted in other mining companies, of which we may have something to say hereafter.

We had frign hoped that any further remarks on the "strike" of the colliers would have been rendered unnecessary by the exercise of good sense on the part of those, who misled, must surely, ere this, have discovered their error; but we regret to say that the delegates—the "agitators" who look to the "rent" and their own pay—are still actively pursuing their vocation, and, except that the colliers starve themselves out, there is but little hope, at least for a time, of an understanding being come to by masters and men. A letter, which we have received from the immediate district in which a meeting was lately held at Tunstall, informs us that it was attended by upwards of 1500 miners and colliers, and that, at this moment, between 1000 and 5000 of the pitmen in North Staffordshire have joined the strike—the aggregate number being estimated at upwards of 100,000.

attended by upwards of 1500 miners and colliers, and that, at this moment, between 4000 and 5000 of the pitmen in North Staffordshire have joined the strike—the aggregate number being estimated at upwards of 100,000.

Confining ourselves to this demonstration on the part of the working collier and miner, we would needs ask—From whence are the funds to be raised to find the means of subsistence for those 1500 men, who have thrown themselves out of employ and their families? At 10a. a week, which, we believe, in the amount promised to the "turn-outs," it would require 750d to 800d, weekly for this locality alone, and this must be found by the employed collier, who, of course, in proportion to the payment he makes to the "longer" as his quests, so abstracts from his own resources, and deprives his family of those comforts—indeed, we might say, necessaries—that they require. We fear that, when too late, these misquised mon will discover their corner, and wish to retrace their stops; but, we would ask—may, we would appeal to them—Will this be practicable?—May they not, by their obstinacy, have provoked the re of their heat and only friends, their employers? We look with serious apprehension on such day arriving.

Mr. Haavsacova, in his address, distinctly tells the operatives, that it is not in his power to make any alteration, or to comply with the requisition of the Unionists to reduce the hours of labour from twelve to eight, and the daily wages from 3e 6d, to 3a—in by this means, it is contended, on their part, that the unsemployed will get into occupation, labour will become equalized, and, ultimately, the meaniers be exalided to increase the rate of wages. The masters, however, object to this arrangement, from the feeling, that, should they consent, does not conjudying any men connected with the Union, but the moments as all rises, and thou for the ordinare in the subsers of hours' work, or a per day. Some of the masters in the power have destructed up to Saturday land.

MR. HOPKINS'S SYSTEM OF MINERALOGY IN CONNEXION WITH TERRESTRIAL MAGNETISM.—No. II.

WITH TERRESTRIAL MAGNETISM.—No. II.

The sixth chapter of this interesting work treats on the general character of the crystalline rocks, called "primary," and, as a thorough knowledge of the mature and properties of these rocks bears so peculiarly on the successful researches of the miner, we may move be considered as approaching that part of the treatise bearing more particularly on practical and economic geology. In his prefices, the author observes, "there is no branch where property in the companion of a practical miner being often the only induced we, as mining—the opinion of a practical miner being often the only induced that carry on a mine; and, when two practical men differ, there is no least to carry on a mine; and, when two practical men differ, there is no least to carry on a mine; and, when two practical men differ, there is no least to carry on a mine; and, when two practical men differ, there is no least to entry on the differ there is no least to the differ the differ there is no least to the differ the

epitts informerting the east and west cracks is owing to one being subject to perpetual imaginushed successeries, and the other in transverse action.

In the nighth chapter, Mr. Hopkins proceeds to the consideration of mineral veina, their mede of filling, and general character—a enhance on which whole range of grodagy. To avoid confusion in the terms, he cancer out and whole range of grodagy. To avoid confusion in the terms, he cancer out and whole range of grodagy. To avoid confusion in the terms, he cancer can see the racks are, more or less, astirated with minerals noted than a state fit for racks are, more or less, astirated with minerals all the porce; and Mr. For chamical action, leaving five notion through all the porce; and Mr. For has proved the existence of subscreament currents, by measurem experiments, in the Coronish miner. The purper of couchs hough filled with an increase of linne; in miles in limeatume, the veins will be filled with the predictancing substance we find the formers interessed from filled with the predictancing substance of linne; in mineral sails than enother, the crarks will be found to considerated with mineral sails than enother, the crarks will be found to constance the fill predicts portion opposite such part of the rock is secon circumply allocated with mineral sails than enother, the crarks will be found to contain the fill predicts of the mineral sails than enother, but the fill count in section of the mineral sails than enother, the crarks will be found to contain the fill of the contains the fill of the sails of the fill of the contains that the fill of the contains the fill of the contains of the mineral sails than enother, the districts consist of backs, point, and linearisms of the mineral sails district.

The classique of the mineral sails than the rack is thereon, up or down, so as to be seen the fill of the contains of the mineral predicts with the process of the mineral predicts of the sails and the contains of the fill of the fill of the fill of the fill of the hereing been silted from above or from heles; and proved there been from above or from heles; and proved there been from the proved cyen, and gradually filled by lateral m the homotolog rocks. The same of filling may be expected to the point of a battery, in-Excitation for the homeoding rocks. The section of a backery, too believe the homeoding rocks of the prime of a backery, to be because of class of the because of the prime of a backery, to a proper prime of the section of the backers are now, to organize the file of the charactery will be franced to a section of the charactery and the section of the charactery of the section of the secti

fresh mineral—native copper, after, din, depoined on wood, leather, and other substances; and sand, from which the gold had been taken, and aleandoned, becoming sufficiently rich to wash again, after a few years, if situated immediately on a primary rock. He deduces, from these facts—that the cleavage planes are not neer local phenomens—that crystallisation and meridional structure continue to be formed by magnetic currents from seeth to north—that the splits and transverse fractures are caused by these currents—and that, from the order of the heaves, and the indusere of the impermetable splits on the contents of the veine, it wants but the magnetic needle, the knowledge of the local grain, or lamine, its notalliferous channels and configuration, to enable persons to know where minerals have been principally deposited, and where scarcity prevails, in any mining district, be it in America or Europe.

which, I am glad to any, are progressing more unliminatedly.

**P.S.—At the time of writing, a box has been sent for to tangupot mominmed in this paragraph.

**Jan. 13..—It is satisfactory to be able to inform you, that the web in the basis of the forty-one, mentioned in my letter of the leth December, has again growed productive in following it enactured from Gibson's thaft, and the lendays' gold report is a more sheering one than you have received for count time. In the other parts of the mise there is little or no alteration; I be new morth yeb occasionally encourages us by yielding a little "search" for the weaking-hease. A box of work has been obtained from the old veio, of the twenty-length of the twenty-one fathson level, at Waher's. The expecters and smiths not having finished the pamp work, the staking has not yet been resumed at Yoney's. The cross-cuts at Canto Gallo, and at the back of the Ellins, are regularly continued, but nothing interesting has not yet been resumed at the suggestion of Mr. Henwood, about a mile to the eastward of Googn, and south of three cross-out made by Capt. Lyon.

Mr. Henwood has been to Cata Prets since my bast, and reports favorably of the advance of the stamps towards completion. Capt. Proglift has now been there some time, and to his presence may be altributed the better progress which has lately been made.

J. K. A. Catenkerr.

P.S.—The produce from the mise yeaterday was 19 lib., 7car. 7dws.; thisten boxes of work still to be cleaned up—they will, peckably, give 1 its, each. On leaving work yesterday, a few particles of gold were visible in the vision. A loss produced, at estimated, 16 lins, the produce of Jan. 18 would be 25 lins. 7 or. 7 dws.

Jan. 14.—Since my last, there has been unbing of importance to communion more than you will learn from the usual official letters, saving that Janes scars post of gold were visible in the vision of gibts aprecise of gold are visible on close inspection. My unity first is a constant supply at fast.
